Jeanine -

Thank you for sharing an update on your outreach to Senators Feinstein and Harris. It is much appreciated. I will be out of the office on Friday on CDO and should there be a need, my backup on Friday is Dean Higuchi who I have copied here and his contact information is 808.541.2711. Stay safe with all the weather related issues.

Brent,

Here is the type of communication we are sharing with the Senators. I understand that all stakeholders are going to coordinate messaging today and that we will make sure that the 3 interested Members have them in advance of public release. Not sure of the timeline for sharing with CODEL (e.g. late today or early tomorrow)- expect will have to see how the coordination goes.

v/r Jeanine

Subject: Hunters Point Parcel A

Thomas and Monica,

Wanted to give you a quick update regarding Parcel A at Hunters Point.

On 10 Sep, the California Department of Public Health notified the Navy that they had found an anomaly during their scanning of Parcel A that they could not attribute to a naturally occurring source. The discovery was located

within the Parcel A boundary, outside of the housing area at Hunters Point. I've attached a photo marked with the approximate location. On 11 Sep, a single deck marker was recovered from approximately 10 inches below ground. The deck marker was found in an undeveloped and inaccessible area behind a fence and did not pose a risk to people living or working at Hunters Point. A picture of the deck marker is also attached. The discovery is expected to draw media attention and may generate requests for additional sampling.

NAVFAC BRAC PMO is preparing a statement to address the finding and has been undertaking extensive coordination with the regulatory agencies (EPA and CDPH), the City, and Five Point. All are coordinating messages with the intent of sharing them today and releasing them on Friday. CDPH has been asked to help put the finding into context (e.g. an analogy to a comparable level of radiation exposure that would be understandable to a lay person such as "comparable to the amount of radiation in your grandfather's watch") and what this finding means in terms of risk. We will share the Navy's notification prior to releasing it to the public.

Best, Jeanine
